Easy Way to Create Your Amazing Portfolio

Project Objective:

As a Full Stack Developer, you have to create a frontend for the myPortfolio application. To develop this application we used angular.

Application used:

Angular:

To develop a front-end application that includes a sign up page, a sign in page, and a landing page

Project Procedure:

Step 1: Create a project in command prompt with the syntax of

ng new <project name> ==➜ ng new MyPortfolio

Step 2: Open Visual Studio Code. Navigate the created angular-app project folder.

Step 3: Create a folder called homepage inside the src/app folder. Add the required code inside the homepage.html, homepage.css, homepage.ts

Step 4: Create a folder called signin inside the src/app folder. Add the required code inside the signin.html, signin.css, signin.ts

Step 5: Create a folder called signup inside the src/app folder. Add the required code inside the signup.html, signup.css, signup.ts

Step 6: Create a folder called environment inside the src folder. Add the required code.

Step 7: Add the required code in main.ts and index.html

Step 8: Run the code using the command --- ng serve
